--	---	--------------------

What's the difference between waterproof and water resistant?

Water resistant toys (i.e. splash-proof toys) will not break if they come in contact with water. They can come in contact with splashes of water or bodily fluids. However, they will not hold up if they are submerged under water for long periods of the time. We would not recommend using water resistant toys in the bath.

Waterproof toys can be submerged under water safely. If you would like to use a toy in the bath, we would recommend a waterproof toy.
